

Z- index

When on the page multiple elements are stacked one above the other, then using z-index property, you may bring elements to front

whoever z-index is higher, that will come at the top.

Animation effects, we may use keyframes can be added as follows

<pre>@keyframe animation1{ from{} to{} }</pre>	<pre>@keyframe animation1{ 10%{} 20%{} ... 100%{} }</pre>
--	---

to use flex box in CSS

there are 2 components

1. container
2. flex item

To download bootstrap and copy .zip file into bootstrapdemos/scripts
